Frontend and full-stack developer building production web apps in React, TypeScript and Node.js. Two years in QA before that, so I ship code that is tested and documented. I also run the work on team projects: Kanban boards, Jira and Confluence. Master of IT at Monash, finishing December 2026. Open to frontend, full-stack and QA roles, and to relocating within Australia.

EXPERIENCE

Frontend Developer | Ailevate Pty Ltd, Melbourne · Dec 2025 - Present

- **FlowIQ**, construction project control for Tier 1-2 builders: built the frontend and backend in React + TypeScript (strict) and Express, with Prisma on SQLite and Zod request validation.
- Built the scheduling-conflict and problems engines that flag double-booked resources and overdue tasks across projects, covered by Vitest suites.
- Built session authentication with role-based permissions; containerised with Docker.
- **Sporty Potato**, a sports court booking platform: sole developer of the venue admin dashboard (Next.js, React, TypeScript, Tailwind CSS), where venues manage courts, classes, bookings, promotions and analytics. Includes auth middleware and API integration with the backend. The customer mobile app was built by others.
- **Lalita Music School platform** (Jun - Sep 2026), with Teman Data on the backend: built the frontend for all four portals (admin, teacher, student and guardian) in React 19, TypeScript, Vite, Tailwind CSS v4, Zustand and React Router 7.
- Guardian portal covers multi-child switching, schedules, attendance, invoices and event registration; student portal adds gamified points and streaks. Installable and offline-capable via vite-plugin-pwa.
- **Interscale:** ran UAT on an AI email routing agent for a client, writing a 34-case test plan and the formal UAT sign-off.

Quality Assurance | Blitz Electric Mobility, Jakarta · Mar 2023 - Jan 2025

- Wrote and maintained test plans for web apps and REST APIs; automated regression tests with Selenium (Python) and Postman.
- Ran UAT, regression testing and bug triage in Jira, documented in Confluence, in an Agile team with international members.
- Tested features end to end, including bulk upload in the admin panel and the delivery-order API.

Software Engineer Intern | Directorate General of Civil Aviation, Tangerang · Jun - Aug 2020

- Led a team of 4 building an information system for lab repairs and airport electronics (Laravel, PHP, MySQL, JavaScript).

Laboratory Assistant | Sumatra Institute of Technology, Lampung · Aug 2018 - Jan 2020

- Assisted students in lab classes for Data Structures & Algorithms (C++) and Intro to Computing.

PROJECTS

Emberhawk | offline-first bushfire preparation PWA · Industry project, team of 5, 2026 · emberhawk.app (login on request)

- Wrote the React + TypeScript PWA, the Node.js/Express API and the AWS deployment, for households in the Dandenong Ranges. Teammates covered data science, AI and cyber security.
- Downloads a versioned area pack once online, then runs maps, road details and the fire estimate fully offline: MapLibre GL + PMTiles basemap, IndexedDB storage, ONNX Runtime Web inference on-device.
- Resumable pack downloader using HTTP range requests, with SHA-256 verification of every asset before the pack is marked ready.

- API on PostgreSQL 16 with PostGIS and pgRouting for spatial queries and road routing; deployed on AWS Amplify (PWA), EC2 behind Nginx (API) and RDS.
- Planned the team's work on a Kanban board and kept the technical documentation.

Sit&Fit | adaptive exercise app for people with disabilities · Team project (4 people), 2026 · GitHub

- Lead contributor (73 of 155 commits) on an Android app that uses the phone camera to check exercise form and count reps; organised the team's tasks on a Kanban board.
- Built the app's screens in Kotlin and Jetpack Compose, the Room database layer for sessions and reminders, and scheduled reminder notifications.
- Built session history and progress tracking, integrated with the team's CameraX + MediaPipe pose detection, Firebase Auth and Google sign-in.

CommonGoal | climate action web app for a Melbourne not-for-profit (fictional brief) · Solo project, 2026 · commongoal-4a77b.web.app · GitHub

- Built the whole app in Vue 3, PrimeVue and Firebase: email and Google sign-in, member and admin roles enforced in Firestore rules, Mapbox map with place search and directions.
- Cloud Functions that verify Firebase ID tokens for rating aggregates, role changes and Brevo email (attachments, admin bulk send, rate limits, key in Secret Manager); a public read-only REST API in Express.
- Sortable, filterable tables with CSV and PDF export, Chart.js admin charts, and WCAG 2.1 AA work (Lighthouse accessibility 100 on every page tested).

SKILLS

Frontend: React 19, Next.js, TypeScript, JavaScript, Vue 3, PrimeVue, Vite, Tailwind CSS, Zustand, React Query, React Router, shadcn/ui, PWAs (Workbox), MapLibre GL

Backend: Node.js, Express, REST APIs, Prisma, Zod

Databases: PostgreSQL, PostGIS (spatial data), pgRouting, SQLite, MySQL, MongoDB

Mobile and cloud: Kotlin, Jetpack Compose, Room, CameraX, MediaPipe, Firebase (Auth, Firestore, Cloud Functions, Hosting)

Testing & QA: Playwright, Vitest, Selenium, Postman, UAT, regression testing, test planning

Tooling: Git, GitHub, GitLab, Docker, Traefik, AWS (Amplify, EC2, RDS), Nginx

Ways of working: Agile (Scrum, Kanban), Jira, Confluence, Trello, technical documentation

Languages: English (IELTS Academic 7.0, 2024), Indonesian (native)

EDUCATION

Master of Information Technology | Monash University, Melbourne · Mar 2025 - Dec 2026 (expected)

- LPDP scholarship (Indonesian Government).
- Relevant units: Industry Experience (FIT5120), Android development (FIT5046), System Validation & Verification (FIT5171).

Bachelor of Computer Science (S.Kom.) | Sumatra Institute of Technology, Lampung · Aug 2017 - Dec 2022

- Thesis: IoT prototype for automated library book returns (Arduino + RFID).
